APPENDIX 1
HOW TO DETERMINE THE LOCATION OF A BUILDING
LINE

This appendix is intended to provide an explanation of how the location of a building line is determined in cases where this By-law regulates the location of the walls of a building that face the front lot line or the exterior side lot line in relation to a building line.

The location of the front and/or exterior side wall is regulated in some Zones by special provisions contained on tables in Section 4.0 of this By-law that read as follows:

FRONT WALL

(special provision applies to required front yard standard)

At least ___ percent of the front wall of the main building shall be located within ___ metre(s) of, or on, the building line. In no case shall the front wall be located in the required front yard.

EXTERIOR SIDE WALL

(special provision applies to required exterior side yard standard)

At least ___ percent of the exterior side wall of the main building on a lot shall be located within ___ metre(s) of, or on, the exterior side building line. In no case shall the exterior side wall be located in the required exterior side yard.

The underlined areas are filled with percentages and numbers that are specific to the Zone the special provision may apply to.

Section 5.3 of this By-law describes how the location of a building line is determined. The following drawings graphically describe how the building line is determined.

FRONT WALL SCENARIO A

Section 5.2.1 (a) of this By-law states that where both the interior side lot lines intersect with the front lot line at a 90 degree angle and the front lot line is straight, the building line shall be located parallel to the front lot line a distance equal to the required front yard. The drawing below shows how the building line is located in this scenario.

Note: This appendix is to be used for illustration purposes only and does not form part of this By-law.

FRONT WALL SCENARIO B

Section 5.2.1 (b) of this By-law states that where one or both of the interior side lot lines intersect(s) with the front lot line at an angle greater than or less than 90 degrees, or if the front lot line is not straight, the building line shall be set back from the mid-point of the front lot line a distance equal to the required front yard and shall be parallel to a line joining the points where the interior side lot lines intersect with the front lot line.

The drawings on the next two pages show how the building line is located on two types of interior lots.

**Note: This appendix is to be used
for illustration purposes only and
does not form part of this By-law.**

TYPE 1 INTERIOR LOT

The location of the building line on this type of lot can be determined by the following the four steps described below:

- Step #1 Draw a line (Line A) extending in a straight line between the points where the interior side lot lines intersect with the front lot line.
- Step #2 Locate the mid-point of the front lot line.
- Step #3 Draw a line (Line C) that extends from the mid-point of the front lot line onto the lot in a straight line a distance equal to the required front yard, with the required front yard measurement being taken from the front lot line onto the lot.
- Step #4 Draw a line (the Building Line) that intersects with the end of Line C at a 90 degree angle with the building line being parallel to Line A.

NOTE The curve on this lot has been exaggerated to show how the location of the building line is to be determined.

Note: This appendix is to be used for illustration purposes only and does not form part of this By-law.

TYPE 2 INTERIOR LOT

The location of the building line on this type of lot can be determined by the following the four steps described below:

- Step #1 Draw a line (Line A) extending in a straight line between the points where the interior side lot lines intersect with the front lot line.
- Step #2 Locate the mid-point of the front lot line.
- Step #3 Draw a line (Line C) that extends from the mid-point of the front lot line onto the lot in a straight line a distance equal to the required front yard, with the required front yard measurement being taken from the front lot line onto the lot.
- Step #4 Draw a line (the Building Line) that intersects with the end of Line C at a 90 degree angle with the building line being parallel to Line A.

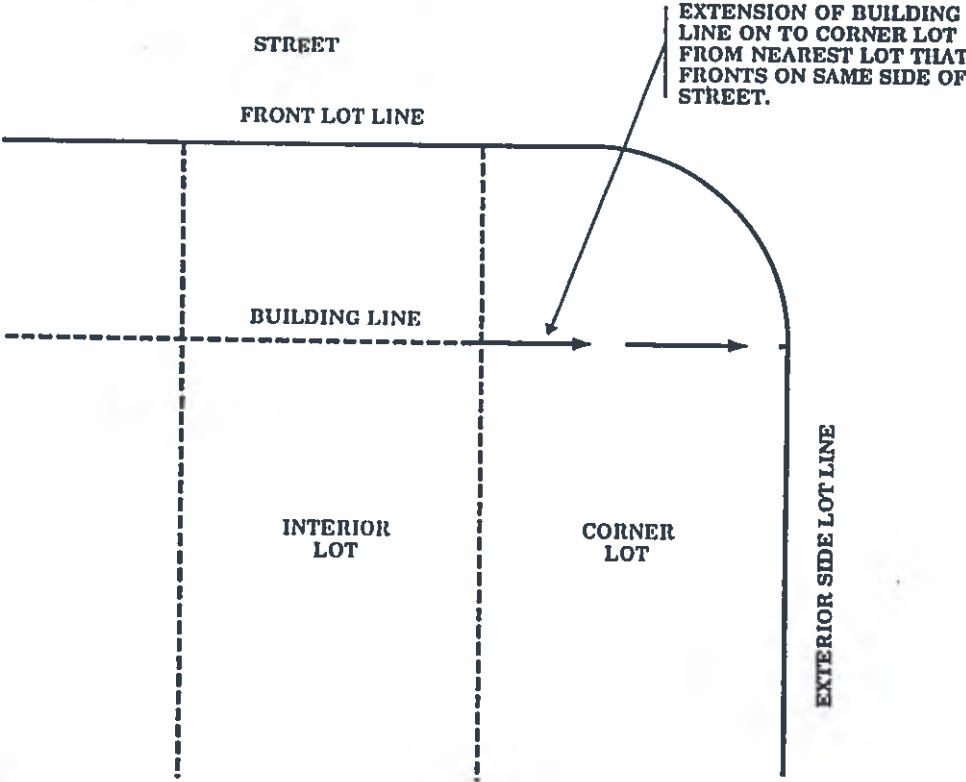

NOTE The curve on this lot has been exaggerated to show how the location of the building line is to be determined.

Note: This appendix is to be used for illustration purposes only and does not form part of this By-law.

**FRONT WALL
SCENARIO C
CORNER LOT**

Section 5.2.1 (c) of this By-law states that where the lot is a corner lot, the building line shall be located on the lot by extending the building line on the nearest lot that fronts on the same side of the street to the exterior side lot line. In addition, a lot that is located at the intersection of a public street and a lane is considered to be a corner lot. The drawing below describes how a building line is located on a corner lot.

Note: This appendix is to be used for illustration purposes only and does not form part of this By-law.

EXTERIOR SIDE WALL

Section 5.2.2 of this By-law states that where this By-law regulates the location of the walls of a building that face the exterior side lot line in relation to a building line, the building line shall be located parallel to the exterior side lot line a distance equal to the required exterior side yard. The drawing below describes how a building line is located on a corner lot.
